A Report of the Course Embedded

PHIL 2306 Contemporary Moral Issues Pre- to Post-Assessment

2015-2016
Description of Contemporary Moral Issues Pre- to Post-Test Assessment

Each fall and spring semester a locally developed pre- to post-test is administered within sections of PHIL 2306: Contemporary Moral Issues. The instrument consists of 25 multiple choice questions, and is administered to students enrolled in those courses at the start and end of each semester. As the instrument was developed by Philosophy faculty with expertise in teaching and assessing these concepts, it is assumed that the instrument has content related validity (Banta & Palomba, 2015). Additionally, as this test was embedded within normal sections of PHIL 2306, the student scores represent authentic student work (Banta & Palomba, 2015; Kuh et al. 2015).

The student data presented within this report reflect student performance regarding the Texas Higher Education Coordinating Board’s Core Learning Objectives of Social Responsibility and Personal Responsibility (THECB, 2016). The THECB (2016) defines these concepts as follows:

- Social Responsibility – intercultural competence, knowledge of civic responsibility, and the ability to engage effectively in regional, national, and global communities
- Personal Responsibility – ability to connect choices, actions and consequences to ethical decision-making

These data should therefore be used in conjunction with other data to fully understand student knowledge and ability with regards to these Core Learning Objectives.

Methodology

A total of 635 students took the pre-test and a total 526 students took the post-test for PHIL 2306: Contemporary Moral Issues for the 2015-2016 academic year; however not all student test scores were used for analysis. In order to determine whether student performance increased from pre-to-post, a dependent samples t-test was used for analysis. Student SamID’s were collected along with student scores in order to identify each student’s score on both the pre- and post-test. A total of 413 students provided their SamID’s and took both the pre- and post-tests. All statistical analysis was therefore conducted on only those students for whom both pre- and post-test scores could be identified.

Prior to conducting inferential statistics to determine whether differences were present between the students’ pre- to post-test scores, checks were conducted to determine the extent to which these data were normally distributed. All four of the standardized skewness and kurtosis coefficients were within the limits of normality of +/-3 (Onwuegbuzie & Daniel, 2002). Therefore, a parametric dependent samples t-test was conducted to analyze student performance data.

Results

A parametric dependent samples t-test revealed a statistically significant difference between in the pre- to post-scores for students enrolled in PHIL 2306: Contemporary Moral Issues for the 2015-2016 academic year, \( t(412) = -19.23, p < .001 \). This difference represented a large effect size (Cohen’s \( d \)) of 1.30 (Cohen, 1988). The average student score increased from 47.26% to 63.84%, for an increase of approximately 16%. Readers are directed to Table 1 for a breakdown of these results.
Table 1

*Descriptive Statistics for Student Pre- and Post-Scores on Course-Embedded Test in PHIL 2306: Contemporary Moral Issues for 2015-2016*

<table>
<thead>
<tr>
<th>Test Version</th>
<th>M %</th>
<th>SD %</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-test Scores</td>
<td>47.26%</td>
<td>10.89%</td>
</tr>
<tr>
<td>Post-test Scores</td>
<td>63.84%</td>
<td>14.33%</td>
</tr>
</tbody>
</table>

*Note.* The number of students was 413.
