BACHELOR'S DEGREES IN HEALTH

The mission of the Department of Population Health is to foster student-centered learning for early and advanced health professionals; to conduct applied, evidence-based research in population health; and to improve health and well-being through community engagement at the local and global levels. Our nationally-recognized programs offer students small class sizes and personal attention from outstanding faculty and staff.

The **bilingual health care studies** degree prepares you to be a culturally competent bilingual patient navigator for employment in various health care settings. The **health care administration** degree emphasizes the skills required to manage contemporary health care organizations through courses in health, business, economics, management, and psychology. The **health sciences** degree can be tailored to meet your individual goals for postbaccalaureate programs of medicine, dentistry, pharmacy, physical therapy, physician assistant, or other health sciences programs. The **public health** degree educates you on how to promote health and prevent diseases. The **wellness management** degree prepares you to manage and facilitate health and wellness initiatives in a variety of settings.

REQUIREMENTS

Please see the online course catalog for the specific requirements for each degree.

Minor: The bilingual health care studies degree requires a minor in a foreign language. The health care administration, health sciences, public health, and wellness management degrees require approved electives rather than a minor.

SCHOLARSHIPS

Once accepted, students may apply for relevant scholarships by completing the Scholarships4Kats online application. Transfer scholarships are available for students who would like to continue their academic career at Sam Houston State University.

INTERNSHIPS

The undergraduate health program provides for majors a 200- or 400-hour professional internship. The internship will be conducted in either the school, community, medical or corporate health setting under the instruction and supervision of a qualified and experienced health-care professional.
