Department of Recreation, Park & Tourism Sciences**

**Texas A&M University**

January 2004

## **Acknowledgement**

Support for this research was provided by a grant from the National Intercollegiate Rodeo Association.

I wish to express my gratitude to the coaches and student members of the National Intercollegiate Rodeo Association. This project could not have been completed without your cooperation. I also want to extend a special thanks to Kathleen Schubert and Kathleen Banz. The technical assistance that you provided while collecting, coding, cleaning, and entering the survey data was invaluable. Thanks to both of you.

## **Preface**

This document provides an illustrative summary of the 2003 survey results obtained from National Intercollegiate Rodeo Association (NIRA) members located in the Southern Region. Figures and tables are used to simplify presentation of the data. All data utilized in this paper were extracted from the 2003 NIRA Membership Survey data set.

### **2003 NIRA Membership Survey**

The 2003 NIRA Membership Survey data were collected via survey questionnaire during the fall of 2003. A survey questionnaire was included with each of the 2003 – 2004 membership application packets administered in the 11 NIRA Regions located within the United States of America (i.e., Big Sky Region, Central Plains Region, Central Rocky Mountain Region, Grand Canyon Region, Great Plains Region, Northwest Region, Ozark Region, Rocky Mountain Region, Southern Region, Southwest Region, and West Coast Region). Survey questionnaires were not included in the membership application packets dispensed in the Canadian Region.

The survey instrument contained 54 questions and required approximately 30 minutes to complete. It was designed to measure the attitudes, opinions, current behaviors, and behavioral intentions of the NIRA membership regarding selected products, services, and name-brand merchandise. In addition, the survey questionnaire collected information on students' educational status, rodeo background, and general sociodemographics, as well as the rodeo events that respondents regularly enter.

Students were instructed to complete the survey and return it with their membership application to the NIRA National Office. No additional communication regarding completion and return of the survey was made. Overall, 2,303 of the 3,123 NIRA members located within the surveyed regions returned their questionnaires.<sup>1</sup> Eleven of the questionnaires were deemed unusable and excluded from the analysis. In sum, 2,292 useable surveys were received. This resulted in a 73% completion rate.

## **Southern Region**

A total of 298 of the 345 NIRA members from the Southern Region completed and returned a useable survey (86% completion rate). These figures may be slightly suppressed due to the fact the respondent's region was not identifiable on nine of the completed and returned surveys.

---

---

<sup>1</sup> In the fall of 2003, student membership in the 11 NIRA Regions located within the United States of America totaled 3,123. Overall, NIRA membership totaled 3,233. This figure includes the 110 student members located in the Canadian Region.
