

## The Lonely Graph

Lyrics and [Performance](#) by Vicki Young  
Melody: "*Heartbreak Hotel*"

When I graph a function, the "y" I want to find.  
If that "y" is missing, it's gonna blow my mind!

'Cause

It's not a function,

And it's so lonely.

Its slope is called

**UNDEFINED.**

This lonely situation – how did it come to be?  
It has not one y-intercept – that letter known as "b".

'Cause

It's not a function,

And it's so lonely.

It's slope is called

**UNDEFINED.**

How do we recognize it? Please come and set me free!

The line, it will be vertical if only "x" we see.

'Cause

It's not a function

And it's so lonely.

Its slope is called

**UNDEFINED.**
