

irrefutable mathematical proof

unknown

i will write this poem
as an escape from the sines and the cosines
the waves don't dance for me
but an invitation for me to drown
in the world to the nth power
everything is so unknown
in the world everchanging
constants are the only thing i fear

expand beyond the equations
all i write is explicit explanations
so explicit that $1 + 1$ is explained
but no one really understands
that if this is all that is out there
why would i bother to pursue
the irrefutable mathematical proof
