CREDENTIALING REQUIREMENTS

4. Criteria for Credentialing

4.1 The minimum requirement for credentialing will be a sixth year/specialist program, with a 60 graduate semester hour minimum, consisting of coursework, practica, internship, and an appropriate graduate degree from an organized program of study that is officially titled “School Psychology.” Criteria for each area will be consistent with NASP’s Standards for Training and Field Placement Programs in School Psychology.

4.2 Domains of Professional Practice

The applicant will complete an integrated and sequential program of study that is explicitly designed to develop knowledge and practice competencies in each of the Domains of Professional Practice. Competency requires both knowledge and skills. School psychology programs ensure that candidates have a foundation in the knowledge base for psychology and education, including theories, models, empirical findings, and techniques in each domain. School psychology programs also ensure that candidates demonstrate the professional skills necessary to deliver effective services that result in positive outcomes in each domain.

The domains on the following page are not mutually exclusive and should be fully integrated into graduate level curricula, practica, and internship. Domains of Professional Practice are more fully illustrated on page 22 of NASP’s Standards for Training and Field Placement Programs in School Psychology.

1. Data-Based Decision-Making and Accountability:
   School psychologists have knowledge of varied models
and methods of assessment that yield information useful in identifying strengths and needs, in understanding problems, and in measuring progress and accomplishments. School psychologists use such models and methods as part of a systematic process to collect data and other information, translate assessment results into empirically-based decisions about service delivery, and evaluate the outcomes of services. Data-based decision-making permeates every aspect of professional practice.

2. **Consultation and Collaboration:** School psychologists have knowledge of behavioral, mental health, collaborative, and/or other consultation models and methods and of their application to particular situations. School psychologists collaborate effectively with others in planning and decision-making processes at the individual, group, and system levels.

3. **Effective Instruction and Development of Cognitive/Academic Skills:** School psychologists have knowledge of human learning processes, techniques to assess these processes, and direct and indirect services applicable to the development of cognitive and academic skills. School psychologists, in collaboration with others, develop appropriate cognitive and academic goals for students with different abilities, disabilities, strengths, and needs; implement interventions to achieve those goals; and evaluate the effectiveness of interventions. Such interventions include, but are not limited to, instructional interventions and consultation.

4. **Socialization and Development of Life Skills:** School psychologists have knowledge of human developmental processes, techniques to assess these processes, and direct and indirect services applicable to the development of behavioral, affective, adaptive, and social skills. School psychologists, in collaboration with others, develop appropriate behavioral, affective, adaptive, and social
goals for students of varying abilities, disabilities, strengths, and needs; implement interventions to achieve those goals; and evaluate the effectiveness of interventions. Such interventions include, but are not limited to, consultation, behavioral assessment/intervention, and counseling.

5. **Student Diversity in Development and Learning:**
   School psychologists have knowledge of individual differences, abilities, and disabilities and of the potential influence of biological, social, cultural, ethnic, experiential, socioeconomic, gender-related, and linguistic factors in development and learning. School psychologists demonstrate the sensitivity and skills needed to work with individuals of diverse characteristics and to implement strategies selected and/or adapted based on individual characteristics, strengths, and needs.

6. **School and Systems Organization, Policy Development, and Climate:**
   School psychologists have knowledge of general education, special education, and other educational and related services. They understand schools and other settings as systems. School psychologists work with individuals and groups to facilitate policies and practices that create and maintain safe, supportive, and effective learning environments for children and others.

7. **Prevention, Crisis Intervention, and Mental Health:**
   School psychologists have knowledge of human development and psychopathology and of associated biological, cultural, and social influences on human behavior. School psychologists provide or contribute to prevention and intervention programs that promote the mental health and physical well-being of students.

8. **Home/School/Community Collaboration:**
   School psychologists have knowledge of family systems, including family strengths and influences on student development,
learning, and behavior, and of methods to involve families in education and service delivery. School psychologists work effectively with families, educators, and others in the community to promote and provide comprehensive services to children and families.

9. **Research and Program Evaluation:** School psychologists have knowledge of research, statistics, and evaluation methods. School psychologists evaluate research, translate research into practice, and understand research design and statistics in sufficient depth to plan and conduct investigations and program evaluations for improvement of services.

10. **School Psychology Practice and Development:** School psychologists have knowledge of the history and foundations of their profession; of various service models and methods; of public policy development applicable to services to children and families; and of ethical, professional, and legal standards. School psychologists practice in ways that are consistent with applicable standards, are involved in their profession, and have the knowledge and skills needed to acquire career-long professional development.

11. **Information Technology:** School psychologists have knowledge of information sources and technology relevant to their work. School psychologists access, evaluate, and utilize information sources and technology in ways that safeguard or enhance the quality of services.

4.3 Practica will consist of a sequence of closely supervised on-campus or field-based activities designed to develop and evaluate a candidate's mastery of distinct professional skills consistent with program and/or course goals. Practica activities may be completed as part of separate courses focusing on distinct skills or as part of a more extensive experience that covers a range of skills.
4.4 The internship experience will consist of a full-time experience over one year, or half-time over two consecutive years, with a minimum of 1200 clock hours, of which at least 600 hours must be in a school setting. A comprehensive internship experience is required for candidates to demonstrate, under supervision, the ability to integrate knowledge and skills in the professional practice domains and to provide a broad range of outcome-based school psychological services. Internship experiences are provided at or near the end of the formal training period, are designed according to a written plan that provides a broad range of experiences, occur in a setting appropriate to the specific training objectives of the program, are provided appropriate recognition through the awarding of academic credit, occur under conditions of appropriate supervision, are systematically evaluated in a manner consistent with the specific training objectives of the program, and are conducted in accordance with current legal and ethical standards for the profession.

4.5 Professional Work Characteristics

The candidate's professional work characteristics will be evaluated and verified by the school psychology training program through information collected during courses, practica, internship, and other appropriate means. Professional work characteristics will include:

1. Respect for human diversity
2. Communication skills
3. Effective interpersonal relations
4. Ethical responsibility
5. Adaptability
6. Initiative and dependability
