Assistant Professor of Equine Science to Serve on the NAEAA Board of Directors

The College of Science and Engineering Technology would like to congratulate Dr. Jessica Bedore, Assistant Professor of Equine Science for the School of Agricultural Sciences, on her recent appointment to the 2021 Board of Directors for the National Association of Equine Affiliated Academics (NAEAA). She began serving on the Board of Directors earlier this month and will serve a three-year term. Dr. Bedore is a dedicated member of the association – she joined in 2010 as a graduate student; more recently, she served on the association’s committee for Diversity and Inclusion.

Dr. Bedore stated that the NAEAA is her “favorite organization to be a part of” and that she “always leaves the annual conference with dozens of new ideas to implement in her courses, and plenty of colleagues to call [upon] when she needs help with a particular teaching strategy.”

The NAEAA is a non-profit organization representing more than one-hundred higher education instructors and the equine industry. It focuses on undergraduate education in equine related disciplines through pedagogical techniques, active learning, and excellence in classroom instruction. The purpose of the association is to “encourage increased cooperation and information sharing between colleges and universities within the equine discipline”.
