Appendix A

Common Final Exam Items for PSYC 1301, Objective 1

1. The variable(s) whose values are supposed to be explained by changes in the manipulated variable(s).
   a. Regression
   b. Independent variable
   c. Common variable
   d. Dependent variable

2. The report says John’s true IQ score is between 95 and 105. The span from 95-105 is considered the
   a. Confidence interval
   b. Confidence level
   c. Complement
   d. Confidence

3. A measure of linear association between two ordered lists is a
   a. Experiment
   b. Correlation
   c. Association
   d. Uncorrelated

4. Which of the following is NOT a kind of plot that summarizes how data are distributed?
   a. Graph
   b. Pie chart
   c. Experiment
   d. Histogram

5. Which of the following is NOT a measure of central tendency?
   a. Margin
   b. Median
   c. Mode
   d. Mean
Appendix B

Common Final Exam Items for PSYC 1301, Objective 2

1. Which of the following is the correct order for hypothesis testing
   a. State conclusion, state research question, calculate test statistic, compute probability
   b. State research question, compute probability, calculate test statistic, state conclusion
   c. State research question, calculate test statistic, compute probability, state conclusion
   d. State conclusion, compute probability, calculate test statistic, state research question

2. A research hypothesis is usually generated after
   a. A review of the literature
   b. An experiment
   c. A research study
   d. Reading the text

3. Many hypothesis testing methods are based on the
   a. Normal school
   b. Normal average
   c. Normal median
   d. Normal curve

4. The grade distributions of Professor X and Professor Y have been observed over many years. Which of the following would be an alternative hypothesis?
   a. The grade distributions of Professor X and Professor Y do not vary significantly.
   b. The grade distributions of Professor X and Professor Y vary significantly.
   c. Of course, the distributions of Professor X and Professor Y are going to differ.
   d. The distributions of Professor X and Professor Y are exactly the same.

5. The bar graph compares the number of students enrolled in psychology classes. Which class is the least popular?
   a. research
   b. abnormal
   c. statistics
   d. cognition

Appendix D

Common Final Exam Items for PSYC 1301, Objective 4

1. How does self-efficacy influence our response to life's everyday problems?
   a. it leads to a "can-do" attitude
   b. it contradicts the idea of optimum complexity
   c. it traps people in self-defeating behavior
   d. it sometimes makes simple problems seem complex

2. Myopia is
   a. Eye muscle strain
   b. Pressure in the pupil
   c. Retina degeneration
   d. Difficulty focusing a visual image

3. What sense dominates our ability to taste foods and liquids?
   a. olfactory
   b. gustatory
   c. kinesthetic
   d. occipital

4. Dopamine is an important transmitter that
   a. Causes depression when too abundant
   b. Produces psychosis in large amounts
   c. Is involved in sensory control
   d. Is commonly used in pesticides

5. According to Festinger's cognitive dissonance theory, people seek to avoid
   a. excessive stimulation
   b. contradictions between behaviors and beliefs
   c. rebellious or negative reactions
   d. music which is not harmonious
Appendix E

Common Final Exam Items for PSYC 1301, Objective 5

1. According to Piagetian theory, formal operations will develop at
   a. age 6 years
   b. Age 11 years and beyond
   c. Ages 7-9 years
   d. Age 18 years

2. When we make the “fundamental attribution error,” we blame somebody’s misfortunes on
   a. Historical factors
   b. Evil
   c. Their personal qualities
   d. Ourselves

3. Why are mnemonic devices effective?
   a. to remember material, you must first pay attention to it
   b. memory depends on the strength of the memory trace and how often it is rehearsed
   c. memory depends on retrieval strategies
   d. they all use imagery

4. The dominant theory which explains "bystander apathy" blames it on
   a. alienation in modern life
   b. modern city life
   c. less feeling of responsibility when there are many witnesses
   d. hostility toward strangers

5. What is a difference between intellectual processes of young versus older people, according to researchers?
   a. Older people do better in the afternoon
   b. Young people are more likely to admit they are “morning people”
   c. Older people have better “crystallized intelligence.
   d. Young people have better vocabulary

Appendix G

Skill Objective – Empirical and Quantitative Skills – QUIZ

Sara runs the indoor track at the HKC Monday through Friday. She wanted to know how many people ran each day. She began to count and write down the total number of people running each day while she was there. She kept data for four weeks.

Mondays = 8, 10, 14, 7
Tuesdays = 13, 10, 6, 11
Wednesdays = 5, 9, 4, 7
Thursdays = 10, 15, 15, 6
Fridays = 3, 7, 10, 4

Organize the data to answer the questions below?

1. What is the overall mean? __________________

2. What is the overall median? __________________

3. What is the overall mode? __________________

Questions 4-8. What is the mean for each day?
Monday _____  Tuesday _____  Wednesday _____  Thursday _____  Friday _____

9. What is the overall range of the entire data set? __________

Arrange the data in a graphic display using a histogram. (scored by rubric – 24 possible points)

From your histogram, answer the following questions?

10. Which day is most popular for runners in the HKC? __________

11. Which day is least popular for runners in the HKC? __________

TOTAL POSSIBLE POINTS = 11
5 – barely adequate
6 – adequate
7-8 – good job
9-11 – excellent
