**Frequency of Points Awarded on the CAT**  
**Sam Houston State University: Spring 2021: College of Arts and Media (CAM)**

Questions 1-4 present students with a scenario and graph. In this section of questions, students will be asked to summarize the trend of the graph, evaluate the strength of the graph in supporting an argument, provide potential alternative explanations for the trend of the graph, and identify additional information that would be useful to more fully understand the situation. This set of questions aligns with CAT App Skill Set 1.

**Q1 Summarize the pattern of results in a graph without making inappropriate inferences.**

A point is awarded for responses that describe the trend in the graph AND do not attribute the findings to a single cause when there are a variety of potential explanations.

**Q2 Evaluate how strongly correlational-type data supports a hypothesis.**

Points are awarded for responses that explain the limitations of the correlation observed and the possibility of alternative explanations.

**Q3 Provide alternative explanations for a pattern of results that has many possible causes.**

Points are awarded for the number of viable alternative explanations provided for the reported findings.

**Q4 Identify additional information needed to evaluate a hypothesis.**

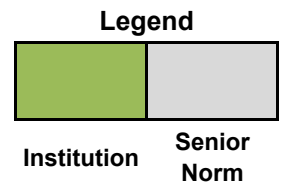

Points are awarded for clearly identifying types of information needed to evaluate competing hypotheses.

**Frequency of Points Awarded on the CAT**  
**Sam Houston State University: Spring 2021: College of Arts and Media (CAM)**

Questions 5-7 present students with a hypothesis and two pieces of evidence. In this section of questions, students will be asked to evaluate the strength of the evidence in supporting a hypothesis, provide potential alternative explanations for the evidence, and identify additional information that would be useful to more fully evaluate the hypothesis. This set of questions aligns with CAT App Skill Set 1.

**Q5 Evaluate whether spurious information strongly supports a hypothesis.**

A point is awarded for recognizing that spurious information does not strongly support a hypothesis.

**Q6 Provide alternative explanations for spurious associations.**

Points are awarded for explaining the spurious nature of the evidence.

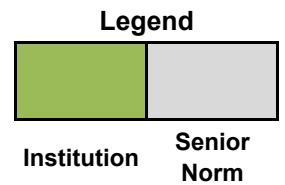

**Q7 Identify additional information needed to evaluate a hypothesis.**

Points are awarded for clearly identifying new information that needs to be obtained to evaluate the hypothesis.

**Frequency of Points Awarded on the CAT**  
**Sam Houston State University: Spring 2021: College of Arts and Media (CAM)**

Questions 8-9 present students with the results of a survey and a corresponding marketing claim. In this section of questions, students will be asked to evaluate whether the marketing claim is supported by the results of the survey and to provide potential alternative explanations for the results of the survey. This set of questions aligns with CAT App Skill Set 1.

**Q8 Determine whether an invited inference is supported by specific information.**

A point is awarded for indicating the provided evidence does not strongly support the hypothesis.

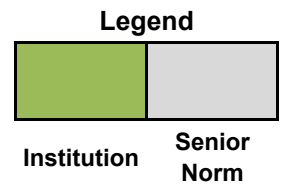

**Q9 Provide relevant alternative interpretations for a specific set of results.**

Points are awarded for providing alternative interpretations of the findings.

**Frequency of Points Awarded on the CAT**  
**Sam Houston State University: Spring 2021: College of Arts and Media (CAM)**

Questions 10-15 present students with a real-world problem-solving task. In this section of questions, students will be asked to evaluate the relevance of available information, read relevant information, evaluate a suggested solution based on relevant information, solve a basic mathematical problem needed to solve the problem, identify a group of appropriate solutions, identify the best solution for a the problem situation, and identify changes to the problem situation that would change the solution. This set of questions aligns with CAT App Skill Set 2.

**Q10 Separate relevant from irrelevant information when solving a real-world problem.**

Points are awarded for correctly identifying information relevant to solving the problem based on the descriptive titles of the available information.

**Q11 Use and apply relevant information to evaluate a problem.**

Points are awarded for applying relevant information from the additional information to the problem.

**Q12 Use basic mathematical skills to help solve a real-world problem.**

A points is awarded for performing a basic mathematical calculation needed to help solve a real-world problem.

## Frequency of Points Awarded on the CAT

### Sam Houston State University: Spring 2021: College of Arts and Media (CAM)

Questions 10-15 present students with a real-world problem-solving task. In this section of questions, students will be asked to evaluate the relevance of available information, read relevant information, evaluate a suggested solution based on relevant information, solve a basic mathematical problem needed to solve the problem, identify a group of appropriate solutions, identify the best solution for a the problem situation, and identify changes to the problem situation that would change the solution. This set of questions aligns with CAT App Skill Set 2.

#### Q13 Identify suitable solutions for a real-world problem using relevant information.

Points are awarded for identifying viable solutions that could solve a real-world problem.

#### Q14 Identify and explain the best solution for a real-world problem using relevant information.

Points are awarded for identify and explaining the best solution to a real-world problem.

#### Q15 Explain how changes in a real-world problem situation might affect the solution.

Points are awarded for identifying a number of changes to the real-world problem situation and explaining how the optimal solution would change.
