Annually, more than 12,000 women are diagnosed with cervical cancer. However, cervical cancer is one of the most preventable types of cancer because it develops over time. The cause of cervical cancer is 99% of the time linked to HPV, Human Papillomavirus, which is a sexually transmitted disease. The mission of NCC is to help women, family members and caregivers battle the personal issues related to cervical cancer and HPV and to advocate for cervical health in all women by promoting prevention through education about early vaccination, Pap testing and HPV testing when recommended.
